#### **SECTIONS 4.6**

**INTEGRATION WITH LOGARITHMIC AND EXPONENTIAL FUNCTIONS** (and a few trig integrals!)

How do you solve 
$$\int \frac{1}{x} dx$$

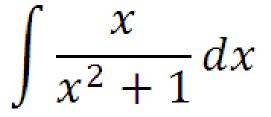

Do you remember a function whose derivative is 1/x?  $\frac{d}{dx}[\ln x] = \frac{1}{x}$ 

Therefore 
$$\int \frac{1}{x} dx = \ln|x| + C$$

The domain of 1/x is  $(-\infty, 0)$   $(0, \infty)$ , but the domain of  $\ln x$  is  $(0, \infty)$ . So we need to use absolute value.

#### EXAMPLES

 $\int_{-4}^{-2} \frac{1}{x} dx$ 

## $\int \tan x \, dx$

## $\int \tan x \, dx = \ln|\sec x| + C$

On Blue Sheets, memorize or not!

### You try: $\int \cot x \, dx$ let $\mathbf{u} = \operatorname{sinx}$ $du = \cos x dx$ $\int \cot x \, dx = \int \frac{\cos x}{\sin x} \, dx$ $=\int \frac{\mathrm{d}\mathbf{u}}{\mathbf{u}} = ?$ $= \ln |u| + C = \ln |sinx| + C$

$$\int \sec x \, dx \qquad \text{First, we multiply numerator and} \\ \operatorname{denominator by } \operatorname{sec} x + \tan x: \\ \operatorname{denominator by } \operatorname{sec} x + \tan x: \\ \operatorname{denominator by } \operatorname{sec} x + \tan x: \\ \operatorname{denominator by } \operatorname{sec} x + \tan x: \\ \operatorname{denominator by } \operatorname{sec} x + \tan x: \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \tan x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x + \operatorname{sec} x; \\ \operatorname{denominator by } \operatorname{sec} x; \\ \operatorname{denominator by$$

You try:  $\int \csc x \, dx$ 

$$\int \csc x \, \mathrm{d}x = \int \frac{\csc^2 x + \cot x \csc x}{\csc x + \cot x} \, \mathrm{d}x$$
$$u = \csc x + \cot x, \frac{\mathrm{d}u}{\mathrm{d}x} = -\csc^2 x - \cot x \csc x,$$
$$= -\int \frac{1}{u} \, \mathrm{d}u = -\ln|u|$$
$$= -\ln|\csc x + \cot x| + C$$

Using trig identities and log rules, you could see this rule in other forms. Such as

 $\ln |\csc x - \cot x| + C$ 

EXPONENTIAL FUNCTIONS  $\int e^x dx = e^x + C$ 

 $e^{5x}dx$ 

 $\int a^{x} dx = \frac{a^{x}}{\ln a} + C$ 

 $\int_{0}^{5} 2^{x} dx$ 

# $\int 3^{\sin\theta} \cos\theta \, d\theta$
